Notice of Network Change – Frame Relay to ATM Carrier Internetworking Interface

Carrier
BellSouth Telecommunications, Inc.
675 West Peachtree Street NE
Atlanta, Georgia 30375

Date Changes are to Occur: February 15, 2003

Location of Changes: BellSouth Region - All nine states

Description of Change Planned: The Frame Relay to Asynchronous Transfer Mode (ATM) Carrier Internetworking Interface allows the transparent internetworking of carrier traffic that transits both a Frame Relay network and an ATM network. Between these two networks, the internetworking function is performed. This internetworking function effectively exchanges the ATM protocol header and the Frame Relay protocol header that encapsulates the transmitted data and preserves the traffic parameters native to each network traversed.

The Frame Relay to ATM Carrier Internetworking Interface function is described in Frame Relay Forum document FRF.8, *Frame Relay / ATM PVC Service Interworking Implementation Agreement*. The FRF.8 Implementation Agreement specifies the many ways in which the service specific parameters (e.g., discard eligibility, cell loss priority, congestion notification, link integrity verification, etc.), map between the two network protocols.

Frame Relay to ATM Carrier Internetworking Interface also allows for the special handling of upper layer encapsulation. There are two modes of operation defined in FRF.8: Transparent (Mode 1) and Translation (Mode 2). Transparent mode switches the data payload through the internetworking function unaltered.

Description of Reasonably Foreseeable Impact of the Planned Change: Interexchange Carriers (IXCs) who desire to use the Internetworking Interface must initiate an Access Service Request (ASR) using existing processes.
